

HYBRID ULTRASONIC FLOWMETER <Duosonics> (Pulse Doppler method + Transit Time method)

DATA SHEET

FSH, FSW, FLY

This meter is the world's first non-intrusive type ultrasonic flowmeter utilizing Pulse Doppler method along with Transit Time method. It enables measurement of velocity profile directly resulting in high accuracy. This makes it suitable for undeveloped flow and for short straight pipes. Pulse Doppler method requires reflectors in the liquid and is utilized on opaque liquids while Transit Time method requires ultrasound penetration and is ideal for clean liquids. The new hybrid technology utilizes both methods in a complementary fashion thus enabling a wider range of applications than it is possible now. In addition, thanks to Fuji's new state-of-the-art algorithm, either method can be automatically switched to accommodate for varying fluid conditions such as concentration of particles and/or air bubbles and flow velocity.

FEATURES

- Automatic switchover function between Pulse Doppler method utilizing ultrasound reflection and Transit Time method utilizing ultrasound penetration**
 - Applicable to various kinds of liquids with/without air bubbles and/or solid particles
 - Applicable to liquid flow that changes in nature frequently or periodically
- High-accuracy non-intrusive (non-contact) volumetric flow rate measurement of liquid flow in closed pipes.**
 - Accuracy of 0.5% to 1% (depending on the measuring mode and pipe size)
 - Clamp-on sensor
- Direct measurement of velocity profile in case of Pulse Doppler method**
 - High accuracy of 0.5% to 1% (correction coefficient unnecessary)
 - Applicable to undeveloped flow (short straight pipe)
 - Applicable to flow hovering in the transitional region between laminar flow and turbulent flow
- High speed response: 0.2sec (pulse Doppler method)/ 0.5sec (transit time method)**
- Real time monitoring of velocity profile by PC in case of Pulse Doppler method (option)**
- Dual-path option improves performance**

SPECIFICATIONS

Operational specifications

System configuration:

The system is composed of one/two detectors (Model: FSW) and one Flow transmitter (Model: FSH), realizing single-path/two-path measurement.

Hybrid mode or transit time mode is selectable.

In case of hybrid mode, either Pulse Doppler method or transit time method is automatically selected depending on conditions of measured liquid and magnitude of velocity.

Flow transmitter (FSH)

Detector (FSW)

Application: Uniform liquid in which ultrasonic waves can propagate.

Air bubble quantity: Pulse Doppler method: 0.02 to 15% of volume at 1 m/s
Transit time method: 0 to 12% of volume at 1 m/s

Fluid temperature: -40 to +100°C (FSW12), -40 to 80°C (FSW21, FSW40, FSW50)

Type of flow: Pulse Doppler method: axisymmetric flow in a filled pipe.
Transit time method: well-developed turbulent or laminar flow in a filled pipe.

Applicable flow pipe:

Material: Plastics (PVC, FRP, etc.) or Metals (carbon steel, SS, copper, aluminum, etc.)

Pipe size: 50 to 1000 mm

(inside diameter)

Liner: Tar epoxy, mortar, etc.

Straight pipe length: Typically 10D for upstream and 5D for downstream. Refer to JEMIS-032 in detail.

(Note) JEMIS: Japan Electric Measuring Instruments Manufacturers' Associations Standard

Velocity: Hybrid mode: 0 to ± 0.3 — \pm Maximum Velocity (depending on pipe diameter) (Note) Maximum measurement range in Hybrid mode (see page 4)

Transit time mode: 0 to ± 0.3 — ± 32 m/s

Power supply:

100 to 240 Vac+10%/-15%, 50/60Hz or 20 to 30 Vdc

Signal cable: Single-path system :
A pair of RF co-axial cables for ultrasound signals and a three-core shield cable for temperature sensor,
Two-path system: Two pairs of RF co-axial cables for ultrasound signals and a three-core shield cable for temperature sensor,
Maximum cable length: 150m
Temperature range : 80°C

Environment: Non-explosive environment without direct sunlight, corrosive gas and heat radiation

Ambient temperature:
-10 to +50°C for flow transmitter,
-20 to +80°C for detector

Ambient humidity:
95%RH or less for flow transmitter, 100%RH or less for detector

Grounding: Class D (less than 100 ohm)

Arrester: Surge absorbers for outputs and power supply incorporated as standard

Performance specifications

Accuracy :

Pulse Doppler method :

Pipe size (inside diameter)	Velocity	Accuracy
ø50mm to ø1000mm (Detector FSWS12)	1.5 m/s to Max. Velocity (Note)	±0.5% of rate
	0 m/s to 1.5 m/s	±0.0075m/s
ø100mm to ø1000mm (Detector: FSWS21,40,50)	1 m/s to Max. Velocity (Note)	±1.0% of rate
	0 m/s to 1 m/s	±0.01m/s

(Note) Maximum velocity is depend on a pipe diameter.
See Maximum measurement range in Hybrid mode (page 4).

Transit time method :

Pipe size (inside diameter)	Velocity	Accuracy
ø50mm to ø300mm or less	2 to 32 m/s	±1.0% of rate
	0 to 2 m/s	±0.02m/s
ø300mm to ø1000mm	1 to 32 m/s	±1.0% of rate
	0 to 1 m/s	±0.01m/s

Response time:

Pulse Doppler method: 0.2sec
(depending on pipe diameter and measuring condition)

Transit time method: 0.5sec

Power consumption:

20W or less

Short-term thermal stability:

140°C, 30 min (FSWS12),

100°C, 30 min (FSWS21, FSWS40, FSWS50)

Functional specifications

Analog output: 4 to 20 mAdc (1 point)
Max. load resistance: 1k ohm

Digital output: +total, -total, alarm, acting range, flow switch or total switch – arbitrarily selectable

Mechanical relay contact:

1 point with socket (replaceable)

Normally closed/open selectable

Capacity: 240 Vac/30 Vdc, 1 A

Total pulse: less than 1 p/s

(Pulse width: 50, 100 or 200 ms selectable)

Transistor open collector: 2 points

Capacity: 30 Vdc, 0.1 A

Normally off/on selectable

Total pulse: less than 1000 p/s

(Pulse width: 0.5, 1, 2, 5, 10, 20, 50, 100 or 200 ms selectable)

Communication interface:

RS-232C equivalent / RS-485 (selectable)

Number of connectable units: one (RS-232C)/up to 31 (RS-485)

Baud rate: 9600/19200/38400 bps selectable

Parity: none/odd/even selectable

Stop bit: 1 or 2 bits selectable

Distance: up to 15 m (RS-232C)/up to 1k m (RS-485)

Data: velocity, flow rate, +total, -total, status (standard), velocity profile (option)

Display device:

Graphic LCD (number of pixels: 240x64) with back light,

Display language:

Japanese, English, French, German or Spanish selectable

Velocity/Flow rate display:

Display of velocity and/or flow rate with flow direction

Data: up to 10 digits (decimal point to be counted as 1 digit)

Unit: Metric/English system selectable

	Metric system	English system
Velocity	m/s	ft/s
Flow rate	L/s, L/min, L/h, L/d, kL/h, ML/d, m³/s, m³/min, m³/h, m³/d, km³/d, Mm³/d, BBL/s, BBL/min, BBL/h, kBBL/d, MBBL/d	ft³/s, ft³/min, ft³/h, Mft³/d, gal/s, gal/min, gal/h, Mgal/d, BBL/s, BBL/min, BBL/h, BBL/d, kBBL/d, MBBL/d

Note: "gal" means US gal.

Total display: Display of forward or reverse total

Data: up to 10 digits (decimal point to be counted as 1 digit)

Unit: Metric/English system selectable

	Metric system	English system
Total	mL, L, m³, km³, Mm³, mBBL, BBL, kBBL	ft³, kft³, Mft³, gal, kgal, mBBL, BBL, kBBL, ACRf

Configuration:

Fully configurable on keyboard by menu-driven software

Zero adjustment:

Set zero/Clear available. (transit time method)

Damping: 0 to 100s (every 0.1s) configurable for analog output and display

Low flow cut off:

0 to 5 m/s configurable

Alarm: Hardware fault/process fault can be tied to digital output

Burnout: Analog output: Hold/Upper limit/Lower limit/Zero/Not-used selectable
Total: Hold/Count selectable
Timer: 0 to 900s (every 1s) configurable

Bi-directional range:
Forward and reverse ranges configurable independently
Hysteresis: 0 to 20% of working range configurable
Working range applicable to digital output

Auto-2 ranges:
Forward 2 ranges configurable independently
Hysteresis: 0 to 20% of working range configurable
Working range applicable to digital output

Flow switch: Lower and upper switching points configurable independently
Acting point applicable to digital output

Total switch: +total switching point configurable
Acting point applicable to digital output

Physical specifications

Enclosure protection:

Flow Transmitter: IP67,
Detector: IP67

Mounting:

Flow Transmitter: wall mount
Detector: clamped on pipe surface

Acoustic coupler:

Silicon compound (RTV)

Material:

Flow Transmitter: aluminum alloy
Detector: PBT for housing, aluminum alloy for frame and SS for fastening belt

Sensor cable(FLY6):

RF coaxial cable (double shielded)
External sheath: Black flame-resistant vinyl
External diameter: About 7.3 mm
Terminal treatment: Water-resistant BNC connector (detector side), M3.5 amplifier terminal (converter side)
Weight: About 90 g/m

Temperature sensor cable(FLY7):

3-core shield cable
External sheath: Gray flame-resistant vinyl
External diameter: About 6.9 mm
Terminal treatment: Round waterproof connector (detector side), M3.5 amplifier terminal (converter side)
Weight: About 56 g/m

Dimensions:

Flow Transmitter : H240 x W247 x D134 mm
Detector: H70 x W57 x L360 mm (FSWS12)
H72 x W57 x L540 mm (FSWS21)
H90 x W85 x L640 mm (FSWS40)
H82 x W71 x L258 mm (FSWS50)

Mass:

Flow Transmitter: 5 kg
Detector: 1.7 kg (FSWS12), 1.9 kg (FSWS21),
5 kg (FSWS40), 1.5 kg (FSWS50)

Conditions on straight pipe

Classification	Upstream side	Downstream side
90° bend		
Tee		
Diffuser		
Reducer		
Various Valve	 In case that flow control valve exists on upstream side.	 In case that flow control valve exists on downstream side.
Pump		

(Note) The source : JEMIS-032

Measurement principle

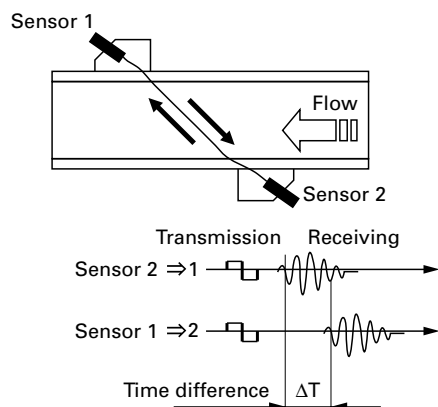

<Pulse Doppler method>

- Ultrasound pulses are transmitted into a liquid, and flow velocity profile is found and the flow rate is measured by using the characteristics that Doppler frequency of the echo from reflectors such as air bubbles and particles in the liquid changes according to flow velocity.

<Transit Time method>

- Ultrasound pulses are propagated slanted both from the upstream and downstream, and flow rate is measured by detecting the time difference generated with the flow.

Maximum measurement range in hybrid mode

When stainless steel is selected as pipe material, nominal wall thickness is Sch20s, and the fluid is water

								1			Signal cable (9th digit) None
											Acoustic coupler (10th digit) (Note) None Silicone compound
											Option (11th digit) None Tag Plate

(Note) Select silicone compound (A) for acoustic coupler in ordinary cases. Silicon compound is supplied in a tube (150g). If one or more detectors are ordered, silicon compound may be selected once every 5 orders or so.

Loader software for PCs

Equipped as standard

- Works on PC/AT compatible machines.
- Operation on PC98-series machines (NEC) cannot be guaranteed.
- Operation on self-made PCs or shop-brand PCs cannot be guaranteed.
- Major functions: Setting/changing of various parameters for the main unit

If no flow velocity profile output is selected, the following functions are not available.

“Detailed setting” and “flow velocity profile display” in pulse Doppler measurement

“Detailed setting” and “received signal display” in Transit time measurement

- O/S: Windows2000/XP
- Memory requirement: 128MB or more
- Disk unit: Windows2000/XP-compatible CD-ROM drive
- Hard disk drive capacity: Free space of 52MB or more

Note: PC loader communication cable (type ZZP*FSH TK4H6253) is separately required.

Detector frame installation fixture

Installation fixture is provided to facilitate the positioning of the frame to the piping.

Select a desired type from the following according to the detector to be used.

Type	Applicable detector
ZZP*FSW TK7M7071C1	FSWS12
ZZP*FSW TK7M7071C2	FSWS21
ZZP*FSW TK7M7071C3	FSWS40

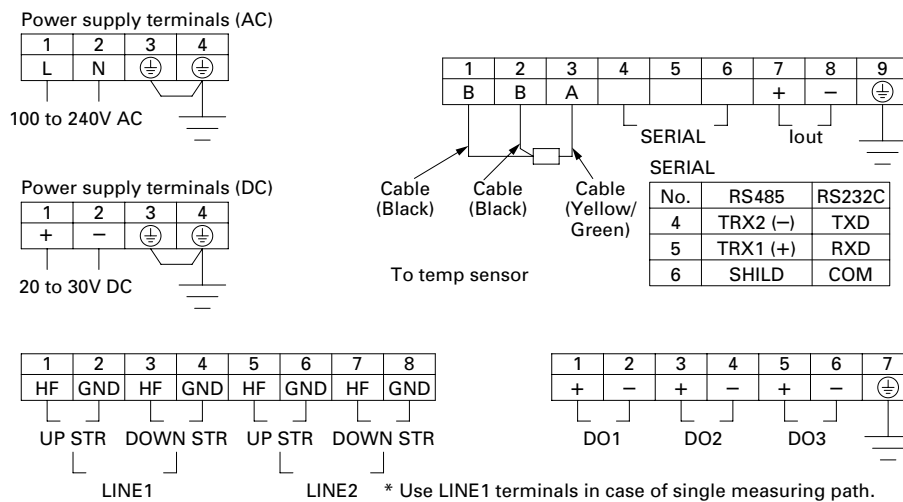

Note: The installation fixture cannot be used for detector type FSWS50, which is not provided with a frame.

Note1: When total pulse output has been selected for DO1, DO2 or DO3 specify total pulse value and total pulse width so that conditions 1 and 2 shown below are satisfies.

$$\text{Condition 1 : } \frac{\text{Flow span-1} \times [\text{m}^3/\text{s}]}{\text{total pulse value} \times [\text{m}^3]} \leq \begin{matrix} 1000 \text{ [In the case of DO1 and DO2]} \\ 1 \text{ [In the case of DO3]} \end{matrix}$$

$$\text{Condition 2 : } \frac{\text{Flow span-1} \times [\text{m}^3/\text{s}]}{\text{total pulse value} \times [\text{m}^3]} \leq \frac{1000}{2 \times \text{total pulse width [ms]}}$$

* In the case of 2 ranges, perform calculations using either flow span-1 or flow span-2, whichever is greater.

Caution on Safety

*Before using this product, be sure to read its instruction manual in advance.
