Data sheet DS/C1900RC-EN Rev. Z

C1900 Series Circular Chart Recorder / Controller

C1900 – dependable recording and full PID control united in a rugged, functional instrument

1 to 4 pen recording

- full application flexibility
- 1 or 2 controllers– integrated control and recording

Analog, relay outputs, digital inputs and transmitter power supply as standard

- range of inputs and outputs built-in

PID autotune on demand

- optimum loop control

20 programmable ramp/soak profiles

- multiple recipe capability

NEMA 4X/IP66 construction

- hose-down protection

0.1 % measurement accuracy

- precise process information

RS485 MODBUS serial communications

- open system compatibility

C1900

The C1900 is a fully programmable circular chart recorder/controller combining two PID control loops with 4-pen recording. The C1900's straightforward operator controls and robust construction make it suitable for a variety of industrial environments. Excellent standard facilities are complemented by a powerful range of options to give the flexibility to match your application.

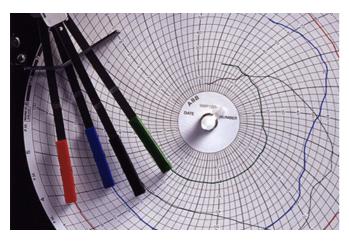

Comprehensive Process Information

The C1900 lets you see the status of your process at a glance: high visibility 6-digit LED displays provide a clear indication of all process signals. Dedicated operator stations for each controller give continuous displays of set points, measured values and high-visibility deviation bargraphs. Active alarms are signalled by flashing LEDs below the main displays.

4-pen Recording

The chart is easily set up to show the information you need in the way you want. Pen ranges are individually set to give the best resolution for each signal; additionally, a **true-time event pen** facility enables one pen to be set up as a 3-position event marker on the same time line as Pen 1.

Straightforward Operation

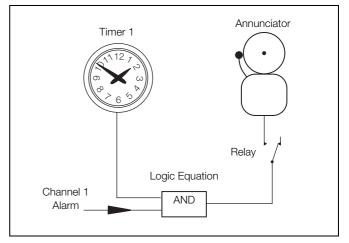

The clearly-labelled tactile keypads permit operator adjustments and configuration programming without the need to open the recorder's door. Separate operator panels for each controller provide a direct route for accessing individual control loops. Clear text prompts on the digital displays guide the user around the various menus. A password-protected security system prevents unauthorized access to configuration adjustment menus.

Flexibility to Solve Problems

The C1900 offers seamless integration of loop functionality to solve process problems, eliminating the need for auxiliary devices.

Totalizers, Math, Logic and Timers

Integrating fluid flow to calculate total volume is performed by the built-in totalizers, available for each channel. Relays can be assigned to increment or reset external counters to match the recorder's totalizer values.

Alarm annunciation enabled during night hours only

User configurable **math functions**, mass flow calculations, RH tables and **logic equations** are all fully supported. The C1900 also offers two event timers driven by the recorder's **real-time clock**.

MODBUS RS485 Communications

Communications with PCs or PLCs are achieved via the RS485 serial communications link. Using MODBUS RTU protocol, all process inputs and other variables can be continuously read by a host PC running any of a wide variety of standard SCADA packages.

Versatile Process Control

The C1900 provides full PID control of one or two process loops in addition to its powerful recording facilities. The control loops can operate independently or be soft-linked together to implement Cascade or Master/Slave control strategies. Each loop has a dedicated 1/4 DIN-style operator panel for ease of operation and clarity of display.

Analog, Relay or Valve Positioning Output

The control output is selectable to fit any application with a choice of analog, time proportioning or valve positioning relays; use of a **feedback potentiometer** to ensure precise valve control is fully supported. Heat/cool operation is available on both loops.

Autotune

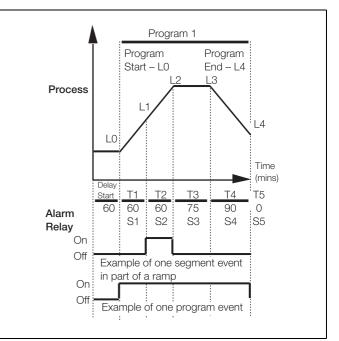

Operation of the autotune function on either loop instigates a tuning routine which allows the C1900 to calculate the optimum PID parameters for that particular loop. Following the completion of autotune, the PID values are automatically updated.

Auto/Manual and Local/Remote

Dedicated membrane keys on each operator panel enable one-touch operation for selection between manual and automatic loop control and for switching from local to remote set point.

Extensive Ramp/Soak Programming

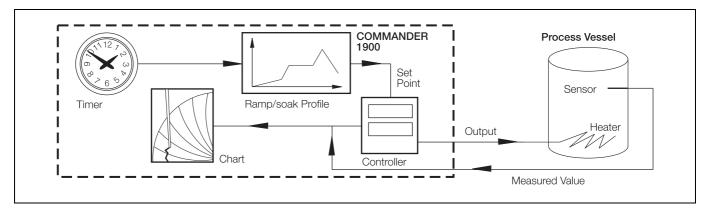

Full control of temperature profiles is provided by 10 program recipes for each controller. A total of 99 ramp/soak segments are available for allocation to these programs. Segment events can be incorporated into the recipes to perform specific functions (e.g. operate relays) at predefined points within the program.

Ramp/Soak Program with Time Event Relay Sequences

Remote Program Selection

External panel switches can be connected to the C1900's digital inputs to allow remote selection of stored profiles and to initiate ramp/soak programs.

Programmed process warm-up triggered by real-time clock

Built to Meet Your Needs

The C1900's modular architecture gives a high level of hardware choice: up to five I/O modules can be added to the basic instrument.

The standard input/output module supplied with every pen comes complete with a fully isolated analog input, a relay output, transmitter power supply, isolated analog output and two digital inputs. Further input and output capability is provided by a range of plug-in modules:

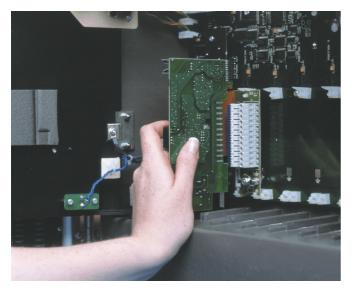

- Analog input and relay remote set point
- Four relays channel alarm outputs
- Eight digital inputs linked using logic equations
- Eight digital outputs TTL level alarm outputs
- MODBUS RS485 communications interfaces with PCs

Expandable for the Future

The C1900 may be quickly upgraded to meet your changing process requirements.

Additional recording channels, math capability or input and output functions can be retrofitted on-site using plug-in cards and easily fitted pen arms. Input calibration data is stored on each card, allowing quick changes to input cards without the need for recalibration.

Changes to input sensors or recording procedures are accommodated by reconfiguration using the main keypad.

Designed to Survive

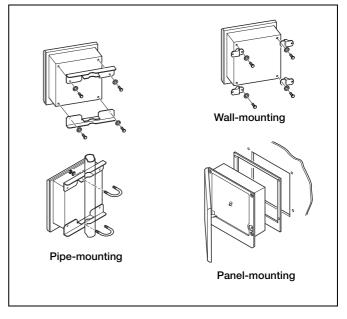

NEMA 4X protection ensures the C1900 can survive in the harshest environments and makes the recorder ideal for use in panels which are regularly hosed down. The tough, acid-resistant case and secure cable-entry glands maintain the NEMA 4X rating for wall-mounted or pipe-mounted instruments.

Noise Immunity

Recording accuracy is maintained in noisy industrial environments due to the advanced EMC shielding within the recorder. The power supply has been designed to give excellent protection from power spikes and brownouts and all configuration and status information is held in nonvolatile memory to ensure rapid recovery after a power failure.

Easy to Install

A choice of mounting options enables simple installation of the recorder in a panel, on a wall or on a pipe. Detachable terminal blocks allow for trouble-free connection of input and output wiring, with mains isolation provided by an optional power switch within the instrument.

Minimal Maintenance

Excellent long-term stability keeps recalibration to a minimum, cutting the costs of ownership. User-selectable chart speeds and long-life pens combine to limit usage of consumables.

Built-in Quality

The C1900 is designed, manufactured and tested to the highest quality standards, including ISO 9001, and is guaranteed by a 2 year parts and labour warranty.

Specification

Summary

1, 2, 3 or 4 pens 1 or 2 PID control loops 10 in. Chart size Standard I/O with each pen includes: Analog input, analog output, transmitter power supply, relay output and 2 digital inputs.

General Specification

Construction

Construction			Operation and Configuration
